RE: Continuous Improvement Process for Corn Planting

Hello,

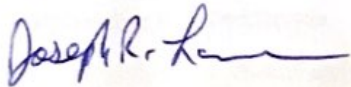

As an extension agronomist with the Cornell CALS PRO-DAIRY program I am excited to partner with Dairy One in disseminating results from their trial Continuous Improvement Process for Corn Planting.

A standardized method of evaluating all conditions relating to the planting of corn is necessary, relevant and useful. I plan to help Dairy One develop a data sheet that includes all the data that my clients and myself feel is relevant. Once results are in from the initial trials, I plan to carefully review the data for information relevant to my region and will participate in a regional meeting hosted by Dairy One providing interpretation of project data and corn management strategies consistent with the continuous improvement concept.

I will make myself available to the team at Dairy One for technical assistance and will participate in annual meetings held to receive my input regarding ongoing improvement of Dairy One project.

If you have any questions or concerns regarding my involvement with Dairy One's Continuous Improvement Process for Corn Planting please contact me.

Sincerely,

Dairy Forage Systems Specialist
